

TRANSCRIPT PREPARED BY THE CLERK OF THE LEGISLATURE  
Transcriber's Office  
FLOOR DEBATE

March 15, 2001 LB 574

technology that allows us to confirm someone's identity by virtue of material that we already have, the picture that is already available, to be able to do that confirmation. I believe that that is a way of protecting individuals. It is a way of using technology in a protective way, and I agree with the analogy that Senator Bromm made about genetic testing. Genetic testing can be...can be problematic if that information is kept in a data bank, if you have no control over it, if it can be used against you. But it can be a very wonderful thing if you're a person who has been...who has been convicted of a crime and then you have genetic testing and it is used to confirm that you were not the person that was guilty of the crime. Con...information used for confirmation, as I believe the facial contour mapping will be used in the confirmation that you are the person that you say you are on the driver's license, is a good thing, and that's what...and it's a benefit of technology, and I think that we should adv...take advantage of the benefits of technology, and this is one of them, and so I would support the Bromm amendment. Thank you.

PRESIDENT MAURSTAD: Thank you, Senator Brown. On the Bromm amendment, Senator Chambers.

SENATOR CHAMBERS: Mr. President, members of the Legislature, I just have to make a couple of more comments. I'm trying to show restraint this morning, not because I want to be a good guy, but I need to save as much energy as may be needed in the upcoming titanic struggle. I have said before, and I want it in the record, that my paradigm or model for conducting my affairs is provided by the cobra. A cobra is a highly venomous beast. There are other serpents whose venom, drop for drop, is more deadly than that of the cobra, but people can envision the king cobra, whereas if I mention one of these others, all they think of is a long slithery creature which is no wider at the head, the middle or the tail than anyplace else on its body, unless it has just dined sumptuously. The cobra, nor any other venomous creature, wastes its venom on dead things or fleeing things. If the prey is dead, venom is not used. If the beast is in a protective or self-defense mode, once the threat has been removed, no venom is wasted by the serpent pursuing, just in order to use venom. This is not a stage in the discussion where
